

**Xenox clients are able to show Tweets from Twitter in the Xenox Tickertape. Most companies use Twitter these days for communication with possible clients and would like to use this function in the Xenox products.**

***PLEASE NOTE: Your Twitter page/profile settings should be set so your Tweets are not shielded of. This can be checked and adjusted when needed by changing your account settings. Check the setting saying “Block my Tweets” and check this box OFF.***

To show all your Twitter messages in the Tickertape you need to fill in the following URL:

**[http://twitter.xenox.nl/\[username\]](http://twitter.xenox.nl/[username])**

Instead of the [username] you need to enter your own Twitter username.

In case of Xenox this would be the URL like shown below here:

*<http://twitter.xenox.nl/XenoxMusicMedia>*

You can add this URL to your Personal (Custom) Feeds on the Music & Media Manager.

How to add Personal (Custom) Feeds is explained in the manual for the Xenox Music & Media Manager.
